## **iSOFT continues its expansion in Mexico**

**30 December 2011** – iSOFT, a CSC company, has been awarded a new contract in Mexico by Baja California State Health Secretariat for the implementation of electronic health records in the health sector, including hospital care and primary care, using a patient index with a centralized repository.

129 health centres and three hospitals linked to Baja California's Health Secretariat will have a unified health information system through the integration of iSOFT solutions for hospital care (x-HIS) and primary care (e-SIAP), which will also be connected to the International Vademecum drug catalogue and the QlikView business intelligence platform, as well as the laboratory system in use at the Health Secretariat centres.

Juan Antonio Pérez, director of iSOFT's Mexico and Honduras Business Unit, said: "This new project is the first one signed after our hospital care and primary care systems successfully met the requirements for obtaining the Mexican certification NOM-024-SSA3-2010 in September 2011, making iSOFT one of the first companies to obtain this certification and achieving the highest rating to date. It represents another success in our expansion strategy in Mexico, where three Health Secretariats already use our complete and integrated IT solution model in their regional health systems."

### **iSOFT, a CSC company, in Mexico**

Since 2004, iSOFT has been providing its know-how and expertise in public regional IT health projects in Mexico, starting with the implementation of its IT Solution for hospital environments (x-HIS) in Nuevo León State Health Secretariat hospitals and its IT Solution for primary care (e-SIAP) in health centres in the same state. Subsequently, iSOFT has continued to work with Mexican health authorities, including the Civil Hospital in Guadalajara OPD, Puebla State Health Secretariat and, most recently, Baja California State Health Secretariat.

The specialized healthcare IT multinational company provides IT solutions for all levels of healthcare which are compatible and interoperable with national requirements and needs, as required by a complete healthcare system. In July 2011, the iSOFT hospital care and primary care systems were evaluated in the seven assessable modules by the Mexican Health Secretariat's Directorate General on Health Information (DGIS), pursuant to meeting the NOM-024-SSA3-2010 requirements as the regulatory framework establishing the functional requisites and objectives which must be met by health information systems in order to guarantee the interoperability, processing, interpretation, confidentiality, safety, use of standards and catalogues of the information contained in electronic health records. On 6 December 2011, iSOFT's integrated IT solution obtained the highest rating among the 11 healthcare companies evaluated to date in any of the three criteria: medical care, decision support and technological infrastructure, reasserting the flexible and interoperable capacity of its solutions to adapt to the requirements of Mexico's health service.
